FinSight Eisenhower Matrix:

	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Allow users to add, edit, and delete expenses (with the amount, date, description, and category) ● Organize expenses into categories such (food, transportation, entertainment, and housing) ● Create monthly spending limits for different categories and monitor their remaining budgets ● Let users create savings goals, set target amounts, and manually record contributions ● Display spending summaries, category breakdowns, monthly spending trends, and savings progress	**Schedule - (For V2.0+)** ● Analysis - Calculate spending averages, compare spending across categories and months, and flag unusually high expense ● Use machine learning techniques to identify patterns in spending behavior ● Forecast future expenses using historical spending data ● Create suggestions based on users' spending habits and budget performance ● Bring in trip planning - let users create trips, set travel budgets, and organize estimated costs for transportation and activities
Not Important	**Delegate - (Use a library)** ● Creating charts with JavaFX to create visual representations of spending ● Use Gson to save and load application data through local JSON files ● Use Java's java.time package for date calculations and monthly expense organization ● Use JUnit 5 to support application testing	**Delete - (Cut it)** ● Connecting bank accounts or synchronize transactions ● Supporting money transfers or payment functionality ● Track investment portfolios rather than focusing on personal budgeting (stocks) ● Including an AI assistant for financial questions
